

BUSINESS IN BRIEF

Brain repair centre gets partner

Halifax's Brain Repair Centre is partnering with Neurodyn Inc. of P.E.I.

It is the centre's first private agreement with a Canadian biotech company, said Dr. Harold Robertson, the BRC's research director and professor of pharmacology at Dalhousie Medical School.

"We are excited about this new partnership because Neurodyn's vision and approach align so closely with the Brain Repair Centre's," says Dr. Robertson in a news release. "We each aim to identify and treat diseases of the brain at their earliest stages, before they cause irreparable harm."

Located at the National Research Council's Institute for Nutrisciences and Health in Charlottetown, Neurodyn is focused on the development and commercialization of products for early detection and treatment of neurological diseases.
